

How to use these resources

Future learning today

Preparing for a future full of uncertainty is no easy task, especially when you know that change is not only common but likely to disrupt too. As an L&D professional, you'll know that being reactive isn't enough to prepare you (or your employees) for the skills and knowledge you'll need in the future. Here at Stellar Labs, we believe the key lies in thinking about learning differently and starting to really apply this new mindset to our strategies and learning programmes.

Within this series of resources we've curated a selection of content with one goal in mind: get you thinking a little bit differently.

Transform your L&D function.

Our world is changing, and not just because of Covid-19. Skills gaps. Digital transformation. Whatever is causing the change, your business needs to adapt, evolve and perform better.

Organisational development plays a critical role in this, but does L&D need to change too?

Whitepaper.

Believe it or not, many of us truly don't understand how the brain learns and as a result, we're developing learning and programmes which don't always change behaviours or drive business impact. This whitepaper shows you how science-led learning can help to better meet your learner needs and drive better results.

Infographic.

If you haven't got loads of time to read the whitepaper but just want some of the key information, we've created an infographic so you can have the vital takeaways in a handy visual format.

Podcast.

We were recently joined by Laura Overton. Now collaborating with Charles Jennings at Tulser, Laura shares her sharp insights into what L&D really needs to do to shift internal perceptions. She's astute, informed and passionate - just what we like from a podcast guest. Music to your ears.

Insights.

Chances are, if you are delivering learning, you have a learning culture. It just might not be the one you want. Georgia Blundell from Sea Salt Women's Clothing shares her insights into what really goes into building an engaging, self-driven learning culture. It's not one to miss.

These resources are here whenever you want to access them and we do hope they help you to start thinking about the future of learning today. Enjoy!
